Kanban Inventory Workflow

Here is a basic Kanban inventory system, shown as a Kanban board.

Bin Threshold Reached	Signal Sent	Reorder in Progress	Bin Refilled
The team uses a bin's last item or reaches the reorder point.	The team places a Kanban card on the Kanban board or logs it digitally.	The team places an order or pulls replacement stock from internal storage.	The team refills the bin and returns it to the shelf.
The team removes the Kanban card or scans the barcode or QR code.	The signal waits for action.	Replacement stock is shipped and delivered to the team.	The team reattaches the Kanban card or resets the digital signal.
