

DataMesh App

Business leaders responsible for large-scale programs and processes are torn between meeting end-user demands for flexible work management and maintaining the control requirements for processes to successfully scale. Without a solution to combine both worlds, organizations are left with a precarious combination of disconnected information and stakeholders, inconsistent process governance, and limited transparency.

DataMesh App

Map Data Across Sheets

Eliminate typos, duplicative data entry, and unnecessary work with the Smartsheet DataMesh App. DataMesh provides lookup functionality between sheets and reports, making it easy to keep your data consistent. Collect the data you need quickly across a number of different sheets within Smartsheet. While VLOOKUP also provides lookup functionality, DataMesh offers additional options and capabilities, including:

- Data snapshots: Use one-time/recurring snapshots or embed real-time cell links
- No size limits: Connect your largest sheets with confidence
- Contact columns: Populate contact columns to accelerate collaboration
- New rows: Automatically add rows to the destination sheet from the source sheet
- Overwrite option: Choose whether or not to overwrite existing data
